S Quick save to slot 1
L Quick load from slot 1
Shift+L Undo last load
G Cycle graphics

Remaster menus

Session: save / load slots 1 to 5
Fast forward: Normal, 2x, 4x, 8x
Graphics: EGA / Genesis /
Upscaled / Modern
Help: keyboard / field guide

Keep control

Pause before opening references.
After leaving a menu or another
window, release all keys once.
Fast forward mutes presentation audio.

Menus, stations & practical reference

Context matters

The arrow keys and keypad control whichever part is selected by C. In hull mode, forward and reverse move the tank; in turret mode, they raise and lower the sight.

Gunner Z changes magnification. Commander Z changes map scale. Commander scan is relative to turret bearing and does not rotate the hull or turret.

Enter advances timed intro and briefing screens, changes highlighted mission/day/night/skill choices, and submits names or vehicle identification. In the gunner station it cycles targets. Space advances a mission-title screen and fires in the gunner station.

Left and right adjust the selected Motor Pool ammunition quantity. The loader works automatically and has no station screen.

Quick save and load

Save states include the original machine and writable campaign disk. Loading rewinds both. Quick save uses slot 1; Session exposes all five slots. Undo last load restores the automatic recovery state. Existing states may be incompatible after a native-core update.

Platform shortcuts

Quick save, slot 1: macOS Cmd+S; Windows / Linux Ctrl+Alt+S.

Quick load, slot 1: macOS Cmd+L; Windows / Linux Ctrl+Alt+L.

Undo last load: macOS Cmd+Shift+L; Windows / Linux Ctrl+Alt+Shift+L.

Cycle graphics: macOS Cmd+G; Windows / Linux Ctrl+Alt+G.
